

Time never got a metric treatment.

Our math can only cut 14.7 by so many ways. or Build it up so many times over, $\frac{n}{0}$ errors and $\sum_{i=1}^{\infty} \Omega_i$ ZMF? In consistencies. Time is only realitive to the observer, universe 14bn years old? cool, 1 universe plank length

"Cantor Set" all the bits and peices cut. $0 <= R <= 1$

Can still have "Our time" also.

$\frac{10}{4.7} = 1$ human "Year" plank length

$\frac{1 \text{ HYP}}{365} = 1$ human "day"

$\frac{1}{24} = 1$ hr

$\frac{1}{60} = 1$ min

$\frac{1}{60} = 1$ sec

$\frac{1}{10^{32}} = 1$ "plank" $\frac{1}{10^{32}} = 1$ plank "plank"

Zero!!

Our Best friends

metric time!!

Arbitrary frames of reference, objective Context "U"
